

SOP-01

Incident Management Procedure

Department: NOC Operations | Safaricom Ethiopia PLC | Version 2.1 | 2026

1. Purpose & Scope

This document defines the end-to-end incident management lifecycle for the Safaricom Ethiopia Network Operations Center (NOC). It governs all network events from initial alarm detection through resolution, closure, and post-incident review.

2. Severity Classification

- â€¢ P1 (Critical): Total service outage affecting >10,000 subscribers. MTTR target: 4 hours.
- â€¢ P2 (High): Partial outage or >30% degradation. MTTR target: 5 hours.
- â€¢ P3 (Medium): Single-site or isolated degradation. MTTR target: 8 hours.
- â€¢ P4 (Low): Minor performance deviation, no subscriber impact. MTTR target: 12 hours.

3. Detection & Triage (L1 NOC)

- â€¢ Monitor OSS/NMS dashboards continuously across all 7 regions.
- â€¢ Log alarm in ticketing system within 5 minutes of detection.
- â€¢ Assign severity level per classification table above.
- â€¢ Initiate MTCT (Mean Time to Call Team) clock immediately.

4. Escalation Pathway

- â€¢ P1/P2: Immediate escalation to L2 Domain Engineer on duty.
- â€¢ P3/P4: L1 attempts resolution; escalate after MTCW threshold exceeded.
- â€¢ L2 Domain Engineer engages L3 Vendor Support for unresolved P1/P2.
- â€¢ Management notification mandatory for all P1 incidents within 15 minutes.

5. Resolution & Closure

- â€¢ Verify full service restoration before closing ticket.
- â€¢ Document root cause, resolution steps, and elapsed time.
- â€¢ Complete post-incident report (PIR) within 24 hours for P1/P2.
- â€¢ Conduct Lessons Learned session within 48 hours of P1 closure.

6. SLA Performance Targets

- â€¢ MTCT (Mean Time to Call Team) â€¢ P1: 15 min, P2: 20 min.
- â€¢ MTCW (Mean Time to Clear Warning) â€¢ P1: 30 min, P2: 45 min.
- â€¢ MTTR (Mean Time to Repair) â€¢ P1: 240 min, P2: 300 min.
